Incorporating Digital Forensics in Legal Practice **Presented by PATCtech**

This introductory course is designed to introduce civil and criminal law practitioners to the use of digital forensic methodology in legal practice. Electronic devices generate vast amounts of forensic data that can be used in many aspects of legal practice. These devices, particularly mobile devices, are constantly generating data about you, your location, your activities and your preferences. Our course presenters will draw on years of digital forensic and law enforcement experience to illustrate the role these types of evidence can play in different types of cases, including criminal law, civil litigation, family law, and other practice areas. You will learn about the many different sources and types of electronic information and how this data is collected and preserved, with a focus on mobile devices and cellular records. You will also learn about the security implications your own use of electronic devices may have on your practice.
